

• DISCOVERY BRIEF — PRE-MEETING READ

Bogen.ai x Lucky in Love

A focused growth plan for **Lucky in Love** — built around **AI,** **ops, and the channels you already** **have**

You've built a real brand: women-first racquet and golf apparel with deep catalog, real community, and credible collaborations. The opportunity is operational. Tighten the back-end with AI and lifecycle automation, and a \$1.2M DTC base credibly becomes a \$2M+ branded platform.

15-day full refund / 30-day
exchange (split policy)

MODELED DTC RANGE

\$0.7M – \$2.0M

Base \$1.2M; full company likely
\$2.6M+ with wholesale/teams

The shape of the problem

The brand looks **commercially real but not yet operator-tight**. Three different free-shipping thresholds publicly visible (\$100 / \$149 / \$150). An empty men's collection while men's pickleball is in nav. A split returns policy. A massive seasonal-drop SKU matrix without (yet) visible forecasting discipline. None of this is a brand problem — it's exactly the kind of operational surface that AI + lifecycle automation can professionalize fast.

— WHERE THE LEVERAGE LIVES

Six AI-leveraged levers we'd validate in discovery

High-variant apparel + frequent drops + real community = a near-perfect surface for AI automation. These are the levers we'll test against the live numbers in the meeting.

- 01 Returns & sizing intelligence**
Apparel default is high return rates. AI sizing recommender + return-reason classifier on Loop data typically cuts return rate 15–25% and recovers 2–4 pts of margin. \$\$\$ MARGIN
- 02 Catalog & PDP automation**
2,000+ SKUs, monthly drops, color/sport/size matrix. AI-generated descriptions, alt text, complete-the-look bundles, and cross-sport merchandising ship in days, not months. +8% AOV
- 03 Lifecycle CRM rebuild**
Welcome / browse-abandon / cart / post-purchase / win-back, segmented by sport (tennis / pickleball / golf) and by core-vs-fashion buyer. Email/SMS to 18–25% of DTC revenue. +15% REPEAT
- 04 CX agent on Shopify + Gorgias data**
AI first-line response on tickets — order status, sizing, returns, league orders. Drains 50–70% of volume so humans handle high-empathy and B2B. -HOURS/WK
- 05 Team / league / ambassador engine**
Captain dashboards, AI-generated team-color recos, ambassador code economics, club-pro outreach automation. Turns the existing leagues offer into a real B2B wedge. LOWER CAC
- 06 Demand & markdown forecasting**
Core vs. seasonal SKU classifier; markdown-risk model on prints/capsules; replenishment cadence. Reduces dead stock and raises blended gross margin. +CASH

Why this fits Bogen.ai

Bogen.ai isn't a generic agency. We build operator-first AI systems for owner-operated brands — the kind of work that lives inside Shopify, Klaviyo, Gorgias, Loop, and the data warehouse. Founder-friendly, creative DNA preserved, operating system professionalized.

— THE CONVERSATION

Discovery framework — nine sections we'll work through together

Tactical advice for the meeting itself: lead with sections 1 and 3. Most discovery calls die because the consultant front-loads stack questions before earning the right with strategic ones. Get them talking about pain in their own words first, then pivot to stack to map solutions. Save pricing/timeline for the last 5 minutes.

1 Business context & strategic priorities

- What's the #1 commercial goal for the next 12 months — top-line growth, margin, retention, international expansion, wholesale, or something else?
- Where do you make most of your money today — DTC, wholesale, leagues/teams programs, or licensing collabs (K-Swiss, Simone Jardim)?
- What's been your biggest growth lever in the last 24 months, and what's plateauing?
- Who do you see as your top 3 competitors, and where are you losing share?

2 Current stack & data

- Full stack confirmation — Shopify Plus, Klaviyo, Gorgias/Zendesk, Loop Returns: what else? PIM, ERP, returns analytics?
- Where does customer data live, and is it unified anywhere (CDP, warehouse)?
- Do you have a data team, or is it agency / contractor-driven?
- What's already automated vs. still manual?

3 Pain points — the real ones

- What three things eat the most hours of your team every week that shouldn't?
- Where do you lose the most money to inefficiency — returns, customer service tickets, ad waste, dead inventory, content production?
- What's the return rate by category, and what are the top 3 stated reasons? (Apparel sizing is usually the silent killer.)
- Customer service ticket volume per week and top 5 ticket categories?

4 Customer experience & merchandising

- How is product discovery handled today — manual collection curation, search, recommendations? Conversion rate on PDP vs. search vs. collection pages?
- Any size recommendation tool in place? What's the size-related return %?
- How personalized is the homepage / email / SMS today, and what tools drive it?
- How do you handle the multi-sport buyer (tennis + pickleball + golf overlap)?

5 Content & marketing

- Who writes product descriptions, email copy, social captions today? How long does a new collection launch take from sample to live?
- How many SKUs launch per quarter, and what's the bottleneck — photography, copy, merchandising?
- Are you using AI-generated imagery, video, or copy anywhere yet? What's worked, what hasn't?
- Paid acquisition: CAC trend, blended ROAS, channel mix?

6 B2B / wholesale / community

- How are leagues, teams, and brand ambassadors managed operationally — portal, email, spreadsheets?
- Bulk orders, custom team colors — how much of that is manual?
- Wholesale order volume relative to DTC?

7 Returns & operations

- Loop Returns is in — what's the return rate, and how much of returns processing is automated end-to-end?
- Inventory planning: how do you forecast demand for new collections vs. core/essentials?
- Any chronic dead-stock problem on prints/seasonal vs. core colors?

8 Decision-making & engagement fit

- Who owns the AI/automation conversation internally — CEO, COO, CMO, CTO/Head of Digital?

- Have you evaluated AI vendors or consultants before? What worked or didn't?

- Budget posture for the next 12 months — exploratory pilot, defined initiative, or open?

- What does success look like 90 days after we start working together?

- Decision timeline and process — who else needs to be in the room?

9 Close-the-meeting questions

- If we could solve only one problem for you in Q1, what would it be?

- What would make this engagement a "hell yes" for you?

- What would make it a "no"?

MEETING POSTURE

Respectful, specific, and operationally sharp. Lucky in Love does not need a vague compliment — they need to see that we understand where value is already present, where money is being left on the table, and how a partnership raises enterprise value **without flattening the brand**.

— IF WE SAID YES TODAY

What the first 90 days could look like

A working frame, not a commitment. The exact sequence depends on what we learn in discovery — but this is the shape of how Bogen.ai delivers value fast on a brand like Lucky in Love.

Days 1–14 — Diagnostic

Audit traffic, SKU economics, channel mix, site friction, return reasons, and lifecycle gaps.
Output: a written diagnostic with sized opportunities.

Read-only. No platform changes yet.

DIAGNOSTIC SPRINT

Days 15–45 — Quick wins

Ship copy fixes, threshold consistency, hero-SKU bundles, nav cleanup. AI sizing pilot on top 20 hero SKUs. Email/SMS welcome + abandon flows live.

Targets: +0.3–0.5 pts conversion, +8% AOV.

CONVERSION + CRM

Days 46–75 — AI in production

CX agent live on top ticket categories. Catalog content automation pipeline. Cross-sport recommendation logic. Returns/sizing model in shadow mode.

Targets: -50–70% ticket volume, sizing return rate down 10–20%.

AUTOMATION LAYER

Days 76–90 — KPI cadence + roadmap

Monthly KPI pack and forecast model. SKU-margin ranking and markdown discipline. Decision: scale up, narrow focus, or layer in B2B/teams engine.

Output: 12-month roadmap and steady operating rhythm.

OPERATING RHYTHM

— IF YOU WANT A NUMBER TO REACT TO

Five concrete ways we can engage

Pricing here is indicative — the right shape depends on what discovery surfaces. Most engagements start with a fixed-fee diagnostic and earn the right to the larger work.

Growth Diagnostic Sprint

\$18K–\$35K

3 weeks · fixed fee

Audit of traffic, SKU economics, channel mix, site friction, and retention flows. Written diagnostic + sized opportunity list.

Typical output: 10–25% near-term revenue upside identified, plus a clean investment memo.

90-Day CRO + Merchandising

\$25K–\$45K / mo

3 months

Ship copy fixes, hero-SKU bundles, nav cleanup, PDP testing, and creative merchandising — with weekly KPI reads.

Target: +15–30% DTC revenue uplift from conversion + AOV gains.

Lifecycle CRM Rebuild

\$20K–\$40K setup + \$6K–\$12K / mo

Email/SMS architecture, sport-segmentation, post-purchase cross-sell, win-back, and loyalty logic — built on Klaviyo + Loop.

Target: +15–25% repeat revenue and lower blended CAC.

Team + Creator Engine

\$15K–\$30K setup

+ 8–12% managed commissions / revenue share

Ambassador tiers, club-captain program, affiliate codes, sport-specific landing pages, reporting, and creator recruiting.

Target: 1.5x–3.0x return on channel spend inside 6–9 months.

AI Automation Layer

Custom

scoped after diagnostic

CX agent on Gorgias/Shopify, AI sizing & returns intelligence on Loop, catalog content automation, demand forecasting model.

Best fit when discovery confirms returns, ticket volume, or content production are top-three pain points.

Founder-friendly bias

Lucky in Love is founder-led and family-owned. Bogen.ai's posture: **preserve the creative DNA, professionalize the operating system, and expand the channels that naturally fit the brand.** We're not here to flatten what works — we're here to free up the team's time and make the back-end as sharp as the design.

NEXT STEP

Let's run the discovery

Goal of the next conversation: confirm or correct the picture above, surface the real pain points, and agree whether a paid diagnostic sprint is the right entry point. ~60 minutes, no commitment.
