

• FOLLOW-UP BRIEF — MAY 5, 2026

Bogen.ai × Lucky in Love

Three things we'd build for Lucky in Love — and why **these** **three first**

Brad — thanks for the conversation on May 4. You named the pain points yourself.

Here's our read of where AI gives Lucky in Love the most leverage in the next 12 months, ranked against what you said, with the two things we'd *skip* so you know we listened.

~\$5M

MODELED REVENUE

60% / 40%

WHOLESALE / DTC

2,500+

WHOLESALE ACCOUNTS

7–9x

ANNUAL INV. TURNS

— WHAT YOU TOLD US

The five pain points you named — ranked

These are your words from the call, not our hypothesis. The order is your order: planning was named first and most emphatically. Everything we propose ladders into this list.

01 Planning & forecasting — the single biggest gap

SKU planning, wholesale demand, e-comm demand, production lead times.
You + ops + a salesperson are doing this manually.

\$\$\$ MARGIN + CASH

"One of the biggest pain points the company has is planning and forecasting... we don't have a planner."

02 SKU sprawl & the liquidation funnel

50–70 new styles a month is your secret sauce — but the volume is over-skewed for the business and the wholesale-discount → site-discount → TJ Maxx funnel bleeds margin every cycle.

+GROSS MARGIN

"We're over-skewed... well over-skewed for the size of the volume of the business."

03 Marketing-data overload

\$700K/yr managed by the agency on Google + Meta. The data comes back, but the volume defeats the point.

+ROAS

"They give us all the analytics, all the data. It's too much data. It's too much to look at."

04 Wholesale follow-up — 2,500 accounts on hope

Markdown flyers go to reps, reps forward to customers, "probably gets lost in the mail." There is no systematic touch on accounts that dip, lapse, or under-order vs. season prior.

+WHOLESALE REV

"If you pulled out from my A2000 system... accounts that dipped 10%, automatically generate an email and do a follow-up."

The AI-COO vision (the long game)

Calendar-driven across sales / production / design / marketing, accountability tracked, integrated. Your stated 12-month ambition.

12-MONTH ARC

"I want this agent to be the COO... every date in the company driven, every person accountable, managed by the AI."

What you said you don't need (so we won't pitch it)

Voice AI for returns / sizing recommender — you said fashion sizing is too complex and 20% returns is industry standard, not a pain. **Touching the A2000 ERP** — you said it's #4–5 on your list and the swap risk isn't worth it. We'll work *around* the ERP via API/screen-read patterns, not through it.

— WHAT WE'D BUILD FIRST

Three modules. In this order.

Each ladders into the next. Module 1 earns the right to Module 2 with a quick, measurable win. Module 3 is where the wholesale wedge becomes a real channel. All three feed the AI-COO endgame.

MODULE 01 · LEAD WITH THIS

AI Planner Agent

Demand & inventory forecasting across wholesale + e-comm

The dedicated planner you said you need — built as software, not a hire. Trained on your A2000 sales history, season cadence, and SKU-velocity patterns.

- SKU-level demand forecast for wholesale + DTC channels
- Production lead-time orchestration (CA fabric → El Salvador → Miami)
- Markdown-risk model on prints & capsules — flag at-risk SKUs *before* they hit the liquidation funnel
- Core-vs-seasonal SKU classifier so reorders flow only to the right tier
- Weekly forecast pack: confidence-banded, drift-flagged, exception-only

INDICATIVE INVESTMENT

\$30–50K diagnostic + build

+ \$8–15K/mo ongoing

TARGET OUTCOME (12 WKS)

- ↓ markdown depth 15–25%
- ↓ dead-stock units 20%+
- +1–2 turns added on selected SKU groups

Why first: *highest pain, fastest measurable result, lowest integration risk. Doesn't touch the ERP — reads from it.*

MODULE 02 · YOU SAID YES TO THIS ON THE CALL

Marketing Intelligence Dashboard

\$700K/yr ad spend, one screen, one morning report

Aggregates the data your agency already produces and adds the synthesis layer they don't. The "screenshot the A2000 → AI tells you what's actionable" idea you described — productized across every system you have.

- Single dashboard: Google Ads + Meta Ads + Shopify + A2000 wholesale
- Daily morning report — *what changed, what to do today*, not raw analytics
- Spend-waste detector by audience / creative / SKU
- Margin-aware ROAS — accounts for actual landed cost & markdown drag
- Competitor monitor — Lululemon, Free People, Aloe pricing & assortment

INDICATIVE INVESTMENT

\$20–35K build

+ \$4–8K/mo data + hosting

TARGET OUTCOME (8 WKS)

+10–15% effective ROAS via reallocation

5–10 hrs/wk recovered for you

Agency held accountable to one number

Why second: *you already said yes to this concept on the call ("yes, that's what I'm saying"). Fastest to demo. Builds trust before the bigger swing.*

MODULE 03 · THE WHOLESALE WEDGE

Wholesale Account Intelligence Engine

2,500–3,000 accounts. 30 reps. Zero systematic follow-up — until now.

Your exact example, productized: *"accounts that dipped 10% in January, auto-email them."* Reads A2000 + RepSpark order data, scores every account weekly, routes the right action to the right human.

- Account-health score by buyer (dip, lapse, growth, opportunity)
- Auto-drafted rep outreach, captain & club-pro motions
- Pickleball league program: captain dashboards + AI-recommended team-color SKUs
- Markdown-flyer distribution that *tracks open + click* — no more "lost in the mail"
- US Open Naples / event-pipeline playbook (10×20 = \$100K once; what does the second & third look like?)

INDICATIVE INVESTMENT

\$25–50K setup

+ retainer or 6–10% rev share on recovered accounts

TARGET OUTCOME (6 MO)

10–20% wholesale revenue recovery on dipping accounts

Captain program scales without rep burden
Foundation for the AI-COO calendar layer

Why third: *requires the planner's data + the dashboard's pipes already in place. Once it's running, this is the wedge that turns "Lucky in Love is well-run" into "Lucky in Love is uncatchable."*

The 12-month picture: AI COO

The three modules above produce the *foundation* — clean forecasts, unified marketing data, scored accounts. Layered on top in months 9–12: a calendar-driven orchestration agent that holds sales, production, design, and marketing accountable to dates and exceptions. Brad's vision, but earned through measurable wins first — not promised on day one.

— SNAPSHOT — REFRESHED AFTER THE CALL

Operator pedigree we didn't fully appreciate going in

The prep brief had you as a 16-year-old DTC brand. The reality is sharper: 18 years on Lucky in Love, on top of 35 years running Tail before that. Five generations in apparel. We're calibrating accordingly.

PEDIGREE

5 generations · 53 yrs combined

Tail (35 yrs, sold 2008) → Lucky in Love (18 yrs)

HEADCOUNT

30 employees

Warehouse, design, accounting all under one roof

CHANNEL SPLIT

60% wholesale · 40% DTC

Wholesale-led — counter to the prep-brief assumption

WHOLESALE FOOTPRINT

2,500–3,000 accounts

30 independent reps · Bloomingdale's, Nordstrom, Dick's, soon Dillard's & Macy's drop-ship

MANUFACTURING

Owned factory · 300 workers · El Salvador

Fabric ex-California · CAFTA-compliant · zero duty

INVENTORY VELOCITY

7–9x turns/yr

vs. industry standard 4–5 — exceptional ops

DROP CADENCE

50–70 unique styles/mo

True fast fashion · K-Swiss licensee (M+W)

MARKETING

~\$700K/yr · agency-managed

Google + Meta · in-house graphics support

PICKLEBALL WEDGE

\$100K / 5 days @ Naples

10x20 booth · league program just launched

POSITION

#2 vendor in tennis specialty

Lost 40% share post-COVID, still strong; Lulu, Free People, Aloe entering

What this means for the engagement

You're not a brand that needs a tech transformation. You're a brand with **elite operational fundamentals** and a software gap. The right partner doesn't tell you how to run a garment business — you've forgotten more about that than most consultants will ever know. The right partner builds the AI scaffolding around what you already do brilliantly. That's the posture.

— NEXT

From here

No commitment, no pressure. The next two touches give you data to decide on.

Wine + working session — Miami

Eytan is in Surfside through ~mid-May. Drinks + 30-minute hands-on demo: we run the "screenshot the A2000 → AI tells you what's actionable" idea live with your real screens. Brenda to coordinate.

[THIS WEEK OR NEXT](#)

Mastermind guest seat

AI search optimization with Christopher Ulrich. Wednesday 9 AM ET or Friday 12 PM ET — same topic. Sit and listen, or jump in. Worth it for the AI-search angle alone (Perplexity, ChatGPT, Claude product discovery).

[WED 9AM · FRI 12PM](#)

Module 1 diagnostic proposal

If the demo lands, we scope a 3-week paid Planner diagnostic — read-only, no platform changes, written output sized to your numbers. That's the entry point. Modules 2 + 3 only on the strength of Module 1.

[AFTER DEMO](#)

If none of this fits

That's fine too. Part as friends. The AI search optimization guest seat is yours either way — there's value in the room regardless.

[NO PRESSURE](#)

OUR POSTURE

Founder-friendly. Operator-respectful. We're not here to flatten what works — Lucky in Love works. We're here to free up the time you and your team are spending on planning, data sorting, and wholesale

follow-up so you can do what only you can do: design the next collection, manage the factory, ride the next wave.
