

The LLM Stacking Cheat Sheet

**One AI is a liability. Two is a safeguard. Three is
a system.**

The complete workflow for using ChatGPT, Claude, and
Perplexity together to produce trusted, verified output.

By **Edmund Bogen** | bogen.ai

The 4-Step Stacking Workflow

What goes where, in what order, with which tool. Every large language model hallucinates. Stacking catches errors before they reach your clients.

1 Generate

CHATGPT

Your enthusiastic junior associate. Talented, fast, occasionally overconfident.

First-pass content engine: property descriptions, market analyses, blog outlines, email drafts, client presentations.

Create a [TYPE OF CONTENT] about [TOPIC] for [TARGET AUDIENCE]. Include [SPECIFIC REQUIREMENTS].

2 Verify

CLAUDE

Your detail-oriented quality control manager.

Fact-check the output. Identify logical inconsistencies, unsupported claims, hallucinated statistics.

Fact-check the following content. Identify any claims that cannot be verified, statistics that may be inaccurate, and statements that could be misleading. Flag each issue with a brief explanation.

[PASTE CHATGPT OUTPUT]

3 Fact-Check

PERPLEXITY

Your research librarian -- the one who checks the footnotes.

Searches the live internet in real-time with citations. Verify specific statistics, market trends, and claims.

Verify the following specific claims with current sources: [LIST FLAGGED CLAIMS FROM CLAUDE]

4

Correct + Format

CLAUDE + SKILL

Your graphic designer and brand manager. \$20/month.

Run through your custom Brand Skill. Polished, on-brand, ready for client delivery.

Using my [BRAND NAME] skill, rewrite the following content incorporating these corrections: [LIST CORRECTIONS].
Maintain the original structure but ensure all facts are accurate and the tone matches my brand voice.

[PASTE ORIGINAL CONTENT + CORRECTIONS]

When to Stack

The higher the stakes, the more AIs touch it.

Always Stack

- Property descriptions
- Listing presentations
- Market analyses
- Marketing materials
- Client-facing content
- Contracts

Stack Key Elements

- Internal reports (verify stats)
- Draft emails (confirm dates)
- Blog posts (check claims)
- Newsletter content

Single AI Is Fine

- Internal communications
- Brainstorming
- Personal organization
- Draft ideas for review

Application: Contract Stacking

5-Step Contract Review

- **Step 1 -- Baseline (ChatGPT):** Upload contract. Identify all terms, deadlines, contingencies, obligations, non-standard clauses.
- **Step 2 -- Second Review (Claude):** Same contract, separately. Compare outputs. Both flagged = immediate attention.
- **Step 3 -- Verification (Perplexity):** Verify statistical claims, legal references, regulatory citations.
- **Step 4 -- Comparison (Claude):** Upload both versions: "What changed between these two documents?"
- **Step 5 -- Deadlines:** Extract every deadline, calculate dates, assign responsibility, generate calendar entries.

Application: Content Quality

- **Draft Phase (ChatGPT):** Property details + buyer profile + tone = comprehensive first draft.
- **Critique Phase (Claude):** Identify cliches, empty claims, generic sections, inconsistencies.
- **Refinement Phase (Either):** Revise addressing every weakness while keeping strengths.

The Idiocracy Warning

The moment you stop reading the final product, you've crossed from augmented intelligence to replaced intelligence. You are the expert. AI is the tool.
