Setup: Build Your Risk Radar

One-time setup. Every contract after this takes 2 minutes.

1 Get Your Standard Contract

5 MIN

Download the clean, unmodified version of your state's standard residential contract -- the one your association provides before anyone touches it.

- **Florida:** FAR/BAR "As Is" Residential Contract for Sale and Purchase
- **Other states:** Your state or local association's standard residential form
- Make sure it's the current version with no agent modifications
- PDF format works best -- Claude reads PDFs natively

2 Create a Claude Project for Contracts

3 MIN

Open Claude Pro and create a new Project. Name it "Contract Review - [Your State]". Upload your standard contract to the Project's knowledge base. Then set the Project's system prompt to:

PROJECT SYSTEM PROMPT

Memorize this document word for word. This is our standard residential real estate contract for [YOUR STATE]. Every clause. Every contingency. Every timeline. Every obligation. This is your baseline.

When I upload a new contract, perform a forensic comparison against this baseline and report:

- Every difference, no matter how small
- Any additions not in the standard form
- Any deletions from the standard form
- Any language changes and their implications
- Changes that shift risk from one party to another
- Shortened or eliminated contingency periods
- Removed protections
- Added obligations not previously present

Always provide an overall risk assessment and suggest questions for my attorney.

3 Run Your First Comparison

5 MIN

Upload a recent contract to your new Project and use this prompt:

CONTRACT REVIEW PROMPT (RISK RADAR)

I am uploading my state's standard residential real estate contract AND a modified version I just received.

For the standard contract: memorize every word, clause, contingency, timeline, and obligation.

For the modified version: perform a complete comparison and report every difference (no matter how minor), any additions not in the standard form, any deletions, any language changes and their implications, an overall risk assessment, and recommended questions for my attorney.

I am a [buyer's/seller's] agent in [STATE].

Pro Tip

Compare AI's findings against what you caught manually. Most agents find AI catches 2-3 items they missed. That's the gap this technology closes.

4 Make It a Habit

2 MIN PER CONTRACT

From now on, every incoming contract goes through the Risk Radar before you respond. No exceptions:

- Receive new contract
- Upload to your Claude Contract Project
- Run the comparison prompt
- Review AI's findings
- Bring flagged items to your attorney

You're not providing legal analysis. You're performing due diligence. Your attorney interprets -- you save them the time of hunting for the needle because AI already found it.

Bonus: The Never Miss Engine

Extract every deadline from any contract with one prompt.

+

Deadline Extraction Prompt

5 MIN

A typical contract has 8-20 deadlines. Across 4-8 deals, that's up to 160 to track. This prompt extracts them all and creates calendar events automatically.

NEVER MISS ENGINE -- DEADLINE EXTRACTION

Review this real estate contract and extract every deadline and time-sensitive obligation.

For each item, provide:

- The specific deadline or timeframe stated
- The calculated calendar date (effective date is [DATE])
- Who is responsible (buyer, seller, agent, lender, title company)
- What happens if the deadline is missed
- Whether it can be extended and under what conditions

Then generate Google Calendar links for each deadline with reminders at 7 days, 3 days, and 1 day before.

Organize everything chronologically.

Bonus: Manipulation Detection

When you receive a revised contract that feels "off."

Side-by-Side Forensic Analysis

3 MIN

Use this when you receive a "revised" version and want to catch every change -- especially the ones the other side doesn't mention.

MANIPULATION DETECTION -- SIDE-BY-SIDE ANALYSIS

I am uploading two versions of a contract. Document A is the original agreed-upon version. Document B is the version I just received.

Please perform a forensic comparison: identify EVERY difference between the two documents, no matter how small.

For each difference, explain:

- What was changed
- How the change affects each party
- Whether this type of change is typical or unusual

Flag any changes that:

- Shift risk from one party to another
- Shorten or eliminate contingency periods
- Remove protections from the original
- Add obligations that weren't previously present

Provide an overall risk assessment for my [buyer/seller] and suggest specific questions I should ask my attorney about the flagged changes.

Critical Warning: AI and Redacted Documents

Visual redaction is not true redaction. Black boxes, highlight overlays, and image-based covers do not remove the underlying text. Claude and other AI tools can read right through visual redactions.

If you must upload redacted documents: ensure the redaction permanently removes the underlying data.

When in doubt, don't upload it. Copy only the text you want AI to see into a new document.
